### 9.2 Exponential equations from Tables

Find the growth factor associated with the percent change.

| Percent <br> Change | $45 \%$ | $30 \%$ | $90 \%$ | $20 \%$ | $200 \%$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Growth <br> Factor |  |  |  |  |  |

Explain in general, how you turn a percent change, into a growth factor.

Find the percent change associated with the given growth factor.

| Percent <br> Change |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Growth <br> Factor | 1.5 | 1.75 | 1.05 | 2 | 2.8 |

Explain in general, how you find the the percent change, from a growth factor.

Decide if each table is exponential growth or decay. To find the exponential growth or decay factor, divide each y-coordinate by the previous y-coordinate. Then find the growth or decay rate.

1. Exponential growth or decay?

Factor: $\qquad$ Rate: $\qquad$ or $\qquad$ \%

| $x$ | 1 | 2 | 3 | 4 | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $y$ | 6 | 18 | 54 | 162 | 486 |

2. Exponential growth or decay?

CHALLENGE: Jeff's wealthy uncle wants to donate money to Zak's school for new computers. He suggests three position plans. Write an equation for each plan, then determine which plan would Zak's uncle donate the most money.

Plan 1: He will continue the pattern in this table until day 12.

| Day | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: |
| Donation | $\$ 1$ | $\$ 2$ | $\$ 4$ | $\$ 8$ |

Plan 2: He will continue the pattern in this table until day 10.

| Day | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: |
| Donation | $\$ 1$ | $\$ 3$ | $\$ 9$ | $\$ 27$ |

Plan 3: He will continue the pattern in this table until day 7.

| Day | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: |
| Donation | $\$ 1$ | $\$ 4$ | $\$ 16$ | $\$ 64$ |
